

ABDULRAHMAN AMER

SENIOR SOFTWARE ENGINEER · PLATFORM, CLOUD & INTEGRATIONS

Brooklyn, NY | rocky11229@gmail.com | 1-347-785-4017 | [LinkedIn](#)

PROFILE

Senior software engineer and platform architect with 6+ years owning systems end-to-end — from approved RFCs and cloud architecture to resilient, self-healing production services. Proven track record decomposing legacy monoliths into event-driven microservices, designing HIPAA-compliant cloud infrastructure, and building the automation, observability, and internal platforms that let entire teams move faster. A hands-on technical leader who mentors engineers, drives measurable delivery gains, and translates ambiguous business needs into high-impact, production-grade solutions.

TECHNICAL SKILLS

Cloud & Infra AWS (VPC, EC2, S3, RDS, SQS, ACM, VPC Endpoints, Lambda), Azure (Container Apps), Cloudflare, LocalStack

laC & DevOps Terraform, Docker, GitHub Actions, CI/CD pipelines, auto-scaling, zero-downtime deploys, Makefile, Cross-VPC Networking

Backend Java (Spring Boot, Spring Cloud Gateway), Python (FastAPI, Django), Node.js, REST, SOAP, Saga/Inbox-Outbox patterns, Circuit Breakers, DLQ/Retry

Frontend React, Next.js, Angular, Vite, TypeScript, State Management

Data & Messaging PostgreSQL, MySQL, MongoDB, Redis, Hibernate ORM, event-driven architecture, multi-tenant design

Observability CloudWatch, Honeycomb, Sumo Logic, distributed tracing (Jaeger), Slack alerting, incident playbooks & kill switches

AI / ML Claude / Claude Code, MLOps, self-hosted LLMs, PyTorch, TensorFlow, HuggingFace, MLflow, NLP

Languages Java, Python, TypeScript, JavaScript, C#, SQL, Rust, Bash/Linux, PowerShell

PROFESSIONAL EXPERIENCE

Software Engineer — Platform & Integrations — Flywire

Feb 2024 – Present

Technical owner for the Travel Integration Platform's core API and cross-team connectivity layer. — New York, NY

- ▶ **Platform Architecture & RFC Ownership:** Owned the design and delivery of a greenfield integration API from RFC to production — authoring approved design docs covering AWS service selection, Spring Boot architecture, resiliency strategy, and database schema — replacing a legacy on-prem monolith with a cloud-native, event-driven system serving 20,000+ hotels across document signing, payments, and Salesforce ↔ Oracle Opera Cloud/OHIP synchronization.
- ▶ **Resilience & Self-Healing:** Engineered inbox/outbox patterns, DLQ with retry-visibility logic, and time-boxed requeue handling so failures fail fast and recover without runbooks — moving off a database-queue to event-driven architecture. The system has required zero manual intervention for network, tenant, or provider failures since launch.
- ▶ **Per-Tenant Circuit Breaking:** Built a Redis-backed circuit breaker with custom per-tenant health-scoring algorithms that isolate a single unhealthy tenant from bricking the platform, coordinated with retry timing that avoids collisions with inbox-processed items.
- ▶ **Business Impact:** Enabled the customer migration off legacy Sertifi onto a modern cloud platform; the resilient design helped land the Hilton and Marriott migrations two months ahead of schedule, while modernized internal and external dashboards removed friction between support/CS and customers.
- ▶ **Cross-Team Connectivity Platform:** With no viable buy option for Oracle's complexity and cross-VPN constraints blocking access, built a standalone proxy with Cloudflare wiring and an internal dashboard spanning 8 services across verticals (invoicing, hospitality, payex, per-tenant master settings) — unblocking an entire product vertical to ship new features.
- ▶ **Observability:** Introduced CloudWatch alarms routed into Slack — fixing the cross-environment Lambda hook so alerting worked correctly across envs — and contributed to the company observability-pyramid practice (Honeycomb, Sumo Logic), establishing incident playbooks and kill switches.
- ▶ **Technical Leadership:** Drove a 40% increase in team delivery velocity over two quarters (measured by Jira close rate and GitHub commit velocity) by coaching the 6-person team on effective Claude Code use and niche integration knowledge. Sole maintainer across 7 projects, authoring local-environment docs that let other engineers recreate container clusters and develop independently.

- ▶ **Cross-Functional Influence:** Partnered across product, sales, customer service, and engineering — securing prospective-integration appointments, educating stakeholders, and building demos and POCs to back sales commitments with delivered capability.

Fractional Director of Engineering — Predicate

Mar 2025 – Aug 2025

Founding engineering leader reporting directly to the C-suite; built the team, platform, and execution culture from zero. — New York, NY

- ▶ **Product & Platform Foundation:** Built the entire engineering foundation from the ground up for a platform that ingests sensor data into a data lake to derive signals enabling doctors to remotely monitor patients at home — taking it from concept to a live product with 7 signed customers in under 120 days.
- ▶ **HIPAA-Compliant Architecture:** Architected a HIPAA-compliant AWS environment using a defense-in-depth model — private subnets, VPC endpoints, token authentication, and least-privilege permissions — with compliance secured through BAAs and deliberate infrastructure decisions to fully isolate sensitive patient data.
- ▶ **Self-Hosted ML for Privacy + Economics:** Engineered and deployed a self-hosted LLM for multi-modal audio analysis that delivered HIPAA-grade privacy while outperforming commercial APIs — 70% cheaper per request and more accurate than the third-party alternative.
- ▶ **Internal Platform (Soft PaaS):** Built a soft PaaS that abstracted cloud deployment away from researchers and interns, letting the team focus purely on experiments and analytics rather than infrastructure — accelerating iteration across the org.
- ▶ **Strategic Partnerships & Funding:** Reported directly to the C-suite on a regular cadence and helped secure a partnership with the Mayo Clinic and North Carolina governmental funding via the platform MVP.
- ▶ **Team Building & Execution:** Hired, trained, and managed 3 engineers — owning the backlog I built and using it to assign and sequence work while consistently hitting milestones — and established the team's standards for effective execution. Left behind a platform the team continues to build on and a durable execution culture.

Software Engineer (Full-Stack & DevOps) — ROSNYC

Jan 2020 – Jan 2024

Grew from entry-level contributor to technical owner of the platform's CRM, infrastructure, and lead-intelligence systems over four years. — New York, NY

- ▶ **Scale & Availability:** Engineered and maintained a high-traffic real estate platform serving 200,000+ monthly users — peaking near 500,000 in summer season — owning front-end and infrastructure work that kept lead-ingestion and ad-revenue surfaces highly available through peak load.
- ▶ **Containerization & Auto-Scaling:** Decomposed a legacy monolithic PHP application into containerized microservices with tuned auto-scaling rules, reducing off-peak latency by 30% and eliminating the peak-season site crashes that previously took the platform down under high load.
- ▶ **CI/CD & SDLC Modernization:** Replaced a fragile FTP-based, edit-in-production workflow with a proper merge-request pipeline in GitHub Actions — image builds, passing tests, audit steps, and pressure-test gates required before merge — dramatically improving time-to-market and overall SDLC quality.
- ▶ **NLP Lead-Intelligence System:** Built an NLP-driven “hot lead” ranking system that surfaced the strongest prospects (e.g., the top 40 by budget out of 500) using automated replies and information-gathering strategies — sharpening lead-capture decisions and speeding response to warm leads in busy seasons.
- ▶ **Workflow Automation:** Architected integrations including Twilio (phone and SMS), DocuSign contract workflows, automated follow-ups, email ranking, and fee-resolution tooling — saving agents paperwork time and accelerating their path to showings.
- ▶ **Ownership & Growth:** One of four platform engineers, evolving from an elementary role to owning and leading the CRM, infrastructure, CI/CD, and lead-intelligence work — supporting an internal system that managed 40 agents at departure and has scaled out since on the foundation built.

CERTIFICATIONS & EDUCATION

AWS Certified Cloud Practitioner — Amazon Web Services, May 2024

MFA, Jazz Performance (GPA 4.0) — Manhattan School of Music, New York, NY, 2020–2022
